

ON-GOING FACADE RENOVATION REIMBURSEMENT GRANT

This grant is made possible by Enid Regional Development Alliance, Edward Jones, and our History Makers. You can find a list of donors at mainstreetenid.org. This grant is to encourage historically accurate improvements to a commercial facade within the Main Street Enid boundaries. Restoration of individual façades improves the visual appearance and strengthens the character of the entire downtown, which is critical to the success of the economic health and vitality of the district as a whole.

ELIGIBLE	INELIGIBLE
 Exterior Paint Must use historically appropriate colors {See Attached} Repair & Replace Windows & Doors Exterior Lighting New, Repairs, or Replace Awnings Repairs & Cleaning of Brick Removal of Non-Historic Materials Ex. Slipcovers Signage approval from the City of Enid sign department must be submitted. 	 Expenses Incurred Before Approval/Submission of the Grant Application New Construction Interior Renovations Removal of Historically or Architecturally Significant Features Sandblasting of Brick or Masonry Surfaces Painting Unpainted Brick

	Facade Renovations	Painting & Awning	Signage
Partner	Up to \$2,500 per 25 ft of building frontage	25% ot total cost	25% of total cost up to \$2,500 *Excludes tax and install
Non-Partner	Up to \$1,500 per 25 ft of building frontage	15% of total cost	15% of total cost up to \$1,500 *Excludes tax and install

*Please note that these numbers are for approved renovations, repairs, and signage and that it is not guaranteed that you will receive the full grant amount.

GUIDELINES & DEADLINES

- The building must be located within the Main Street Enid District Boundaries {See Attached}.
- The application must be submitted and approved before work begins.
- Priority will be given to projects that have a significant visual impact, active business use, and historic integrity.
- Applications must be submitted by the **1st of each month** to be added to the agenda & considered for the corresponding month.
- Any applications submitted after the first will be considered during the following month.
 Ex.
 - Dec 2 Jan 1 | January Agenda
 - Jan 2 Feb 1 | February Agenda

With this application, please include:

- At Least One Photo
- Drawing or Rendering of Plan

• Actual Color Swatches, if applicable Cost Estimate from Contractor

Applicant Name:	Business Name:

□ Property Owner □ Renter

If you are not the property owner, written approval for the proposed improvements is required by the owner.

Building Facade Footage

Describe your project & List the estimated cost of improvements

I understand that Main Street Enid must review and approve the grant before work starts and I must submit paid receipts for grant funds as reimbursement. I understand that I am responsible for the ongoing maintenance of these improvements. I understand that work must be started within 90 days of being awarded or a contract must be signed with a construction firm that is doing the work. I understand that the work must be completed within 12 months of the signed awarded contract and that any receipts for work completed after the 12-month mark will not be reimbursed. In the case of extenuating circumstances, the agreement can be extended if agreed by all parties.

Painting Your Building

When visiting many of the Main Street communities the most frequently asked question by building owners is "What color should I paint my building?" For those brick and stone buildings that have not been painted or have less than 50% painted, the answer is easy. DO NOT PAINT! Remove the paint that is there, then give your entire building a good washing. The results will surprise you when all the years of dirt and smog that have collected are removed. But, if your building is already painted and the paint will not come off without further deteriorating the brick, you now have paint color options for stone, brick, wood and metal trim.

Inside are the Oklahoma Main Street Colors that were compiled in communities throughout the different

regions of the state. Some of the colors were copied from bricks and stones or original paints that are found on the historic downtown buildings while other colors were taken from native plants and rock outcroppings.

How to Use

When using the Oklahoma Main Street Colors to paint the façade of your building always remember to use a color that is appropriate. Use the BUILDING COLOR WINDOW FRAME WINDOW SASH PUTTY LINES (OFTEN PAINTED FOR EXTRA DETAIL)

tion. Does the mortar need repointing? Is the wood rotten? Are the windows sealed? After completing these few things you are ready to begin with the primer. Since paint adheres to many materials differently it is important to choose the right type of paint for your project. For wood it is best to use an oil base paint for the primer and either oil or latex for the top coat. For brick buildings you can use an oil or latex based

paint for the primer and the top

coat. For the shine of the paint

you should use a flat or matte finish on a brick building and either gloss, semigloss, or flat for the trim depending on your preference.

color that accents the color of your building. At the bot-

tom of each row is an accent color to use if you decide to

paint your building any of the colors above it. Or you can use the colors stated for only trim use. The secret is to

use a darker trim on a light building and lighter trim on a

dark building. For buildings with metal trim, paint them

After you choose a color and paint for your building and/

or trim there are a few things that need to be completed first. Most important is to prepare the surface by remov-

ing all loose paint. Preferably use a wire brush or a scrap-

er. Next, see that all of the surfaces are in good condi-

a more neutral color or choose darker, bronze colored,

Once you have selected your new colors, this card can be used for computer matching at any local paint supplier.

Cleaning Your Building

If your building has never been painted but the color looks drab or it has been painted but is falling off, maybe it is time for a face- lift. Cleaning your building is not only going to help with its appearance but also with slowing down any deterioration. If you clean your building the wrong way though, you can cause more deterioration.

colors inside to find a color that matches your brick by scraping off the paint to the original façade. If your brick color is unable to be seen through the layers of paint, look at the surrounding buildings. If the buildings are a dark or light red, brown, or yellow then use the same color tone or hue. Do not put a yellow brick building in the middle of the block if none of the buildings on your block or in your downtown are yellow. The color samples found inside are grouped in families across the card. Consider which vertical row(s) best compliment the original color of your masonry and/or work the best with the adjacent buildings.

The trim of the building is the material around the windows, doors, or cornice area. To paint these areas use a

There are many different methods available to clean your building. Keep in mind

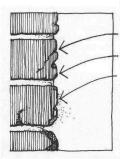

the amount and type of soil or paint to be removed and the type and condition of the masonry. If your building has loose paint or is slightly dirty it would be best to clean it with some water, a bristle brush (not metal) and detergent. Make sure your water and detergent do not leave a stain or further deteriorate your building. If your building has thick paint or is covered in a thick layer of dirt a chemical remover might be best. You can either do it by a chemical wash or by a chemical paper produced

by Dumond Chemicals and ProSoCo. Make sure that the chemical cleaners are appropriate for your building

material. Another common type of cleaning is abrasive blasting. Water blasting, sodablasting, and sandblasting are techniques that should never be used to clean masonry surfaces. This damages and erodes the brick and mortar joints.

Once you have chosen the way you are going to clean your building there are some things still to do before you begin. It is highly recommended that you do a test patch to evaluate the effectiveness of the cleaning method and

to see how it affects the brick. If the brick face rubs off when you touch it or is any way damaged, the bricks or mortar might be too soft to clean. If soap and water did not clean paint off the bricks try another test patch of a chemical cleaner; if this does not work the building might need to be repainted instead. It is possible that your mortar needs to be repointed but first ask a professional whether

it is best to do this before or after you clean the masonry. Before cleaning the remainder of the building, make sure that windows and doors are protected against water and chemical seepage.

Oklahoma Main Street: Styles, Masonry, and Colors
